

SuperFrass

Organic Plant Growth Enhancer and Pesticide

Superfrass is a natural, high-quality organic soil additive that stimulates, regenerates and protects your plants.

Superfrass is a living soil full of beneficial micro organisms which increase the health of the soil.

Superfrass is derived from the castings and exoskeletons of the Black Soldier Fly. The compost pile is loaded with nutrients which stimulate plant growth.

Superfrass contains Chitin (a protein found in the exoskeletons of Insects). The presence of Chitin in the Soil additive fools the plant into believing it's under attack, which increases the health and vitality of your plant yielding thicker stems, bigger flowers, leaves and fruit.

Superfrass is a natural pesticide helping protect your plant against pathogens and fungal diseases.
